

# Winter Scene–3D Plastic Plate Snow Globe

## Getting Crafty: Feb. 7, 2023

### Materials:

Plastic plate snow globe craft template

7” clear plastic plate

Black construction paper

Crayons

Styrofoam craft snow

Scissors

Pencil

Glue

Watercolors (optional)

### Directions:

1. Draw an outdoor winter scene on the snow globe template.
2. Using crayons color in the scene.
3. If you have watercolors, you can paint over the picture with watercolor paint. Pro tip: water down the paint so it is more of a “wash effect”.
4. When the paint is dry, cut out both parts of the snow globe. You can trace the snow globe base onto the black construction paper.
5. Glue the snow globe base to the BACK of the snow globe.
6. Pour about 1-2 tablespoons of the styrofoam craft snow onto the middle of the snow globe picture.
7. Glue the plastic plate to the snow globe. Pro tip: leave the snow globe art in place until the glue dries so the styrofoam balls do not adhere to the plate. You could use a low temp hot glue gun to secure the plate in place.
