VALENTINE'S DAY CRAFTS

Robot Valentines

Cardstock, construction paper, sequins, googly eyes, red glitter, markers, glue, and scissors.

- 1) Cut and fold cardstock into cards. Use scissors to cut some simple shapes from construction paper. Use glue to attach the shapes to the card stock.
- 2) Draw arms, legs, and antennae on with a marker.
- 3) Embellish the robots with sequins, using glue to attach them as antennae tops, hands and wheels. To make the mouths, draw vertical lines on a piece of white paper then cut a half-circle shape so that the lines look like teeth.
- 4) Use your finger to spread some glue onto a piece of construction paper then cover with red glitter. Gently knock off excess glitter and cut two hearts from the glittered paper. Glue the hearts to the robots. Finally, use glue to attach the googly eyes.

VALENTINE'S DAY CRAFTS

3D Optical Illusion Heart Craft

White paper, pencil, markers, & scissors.

- 1) Cut out a heart shape from paper. This will be your heart template to use for each 3D optical illusion heart craft.
- 2) Using a pencil, trace the heart shape onto a piece of lined (or unlined paper). Unlined paper gives really beautiful results, but it can be tricky to draw straight lines, so lined paper provides nice guidelines to use.
- 3) Draw lines through your heart with markers. The lines should be straight on both side of the heart and curved through the heart.
- 4) Use different colored markers and continue to draw more lines to give the picture a different effect.
